

The INRS ultrafast x-ray science program

P. Forget, L. Chen, J.C. Kieffer, INRS, *University of Quebec*

The new INRS laser system (10TW, 60fs, 10Hz) has been commissioned on solid targets at ultra-high intensities. We will present the most recent results obtained on the characterization of the ultrafast x-ray source obtained with the new laser system, and will discuss our application program.
